

The Royal Game of Ur is an ancient Mesopotamian board game. The goal of the game is to get all your tokens to the end before your opponent.

You can run the game either by opening the VisualStudio code itself (/RoyalGameOfUr/RoyalGameOfUr.sln) and running it from there or you can find the compiled version in the folder Game (and there open RoyalGameOfUr.exe). You can view the rules from there (Rules button) or just open the rules.pdf document. Choose whether you want to play with your friend (Play Against Human button) or against computer (Play Against Computer button). Note that you have to choose one of the 3 difficulties for the AI player.

The game was made primarily for Windows, so it might not run on other OS.
